

## SKILLS

|                                   |                                                                                                |
|-----------------------------------|------------------------------------------------------------------------------------------------|
| <b>Programming</b>                | JavaScript, React, Python, Java, PHP, SQL, Bash                                                |
| <b>AI &amp; Data</b>              | LLMs, Prompt Engineering, TensorFlow, Agentic Workflows, Spark, Kafka, Redshift, ETL Pipelines |
| <b>Infrastructure &amp; Tools</b> | Software Architecture, Retool, Docker, MCP Servers, Kubernetes, AWS, Git, Linux, Databricks.   |
| <b>Communication</b>              | English (Fluent), French (Fluent), Arabic (Native), German (Basic)                             |

## PROFESSIONAL EXPERIENCE

|                                              |                                                             |
|----------------------------------------------|-------------------------------------------------------------|
| <b>Software Engineer</b><br><i>Stackdrop</i> | <b>Nov 2025 – Present</b><br><i>Athens, Greece (Remote)</i> |
|----------------------------------------------|-------------------------------------------------------------|

- Working with Wayve (UK-based autonomous vehicle company) on workforce tooling: HR sync workflow, fleet optimization systems, shift organization, and internal UI/backend applications.
  - Built and shipped a risk analysis platform for US-based e-learning clients, covering data ingestion, ETL pipelines, schema design, and UI; integrated multiple third-party risk-assessment APIs into a unified Redshift-backed analytics workflow for real-time and batch risk reporting.
  - Developed internal tools for meeting summarization and progress reporting using RAG and MCP, reducing time spent on progress monitoring across client projects.
- Stack:** JavaScript, Retool, Amazon Redshift, PostgreSQL, React, MCP, System Design, ETL Architecture, RAG

|                                                                    |                                                       |
|--------------------------------------------------------------------|-------------------------------------------------------|
| <b>AI Research Intern</b><br><i>Concordia University – DAS Lab</i> | <b>Mar 2025 – Jul 2025</b><br><i>Montreal, Canada</i> |
|--------------------------------------------------------------------|-------------------------------------------------------|

- Researched automated repair of flaky tests across 400 Maven projects. (end-of-studies project, graded Excellent).
  - Built evaluation pipelines to benchmark LLM performance on code inspection and flaky-test classification tasks.
- Stack:** Python, Docker, Maven, LLM APIs, Software Testing

|                                                        |                                                      |
|--------------------------------------------------------|------------------------------------------------------|
| <b>Software Engineering Intern</b><br><i>Dynatrace</i> | <b>Jul 2024 – Aug 2024</b><br><i>Vienna, Austria</i> |
|--------------------------------------------------------|------------------------------------------------------|

- Built a capacity-planning application for managing team vacation and shift scheduling, deployed internally at one of Europe's leading observability platforms.
  - Integrated the Dynatrace API to surface live performance metrics inside a React dashboard.
- Stack:** React, JavaScript, Dynatrace API

|                                                                      |                                                     |
|----------------------------------------------------------------------|-----------------------------------------------------|
| <b>Software Engineering Intern</b><br><i>Target Energy Solutions</i> | <b>Jul 2023 – Aug 2023</b><br><i>Tunis, Tunisia</i> |
|----------------------------------------------------------------------|-----------------------------------------------------|

- Built an NLP database query tool using transformer-based LLMs, reducing ad-hoc data retrieval time for non-technical staff.
- Stack:** Python, TensorFlow, SQL, LLM APIs

## EDUCATION

|                                                                                                           |                            |
|-----------------------------------------------------------------------------------------------------------|----------------------------|
| <b>M2 Master's, Information Processing &amp; AI</b><br><i>National Engineering School of Tunis (ENIT)</i> | <b>Sep 2024 – Nov 2025</b> |
|-----------------------------------------------------------------------------------------------------------|----------------------------|

|                                                                                                  |                            |
|--------------------------------------------------------------------------------------------------|----------------------------|
| <b>Computer Science Engineering Degree</b><br><i>National Engineering School of Tunis (ENIT)</i> | <b>Sep 2022 – Sep 2025</b> |
|--------------------------------------------------------------------------------------------------|----------------------------|

|                                                                                                                                    |                                                         |
|------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------|
| <b>Pre-engineering Studies (Mathematics &amp; Physics)</b><br><i>Preparatory Institute for Engineering Studies of Sfax (IPEIS)</i> | <b>Sep 2020 – Jun 2022</b><br><i>Top 20% Nationally</i> |
|------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------|

## PROJECTS

|                                                                                                                                                                                                                                                             |                                                             |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------|
| <b>Academic Project, Big Data Real-Time Analytics Pipeline</b><br>Designed a Lambda Architecture unifying real-time and batch processing for cryptocurrency analytics, with a Kafka + Spark Structured Streaming layer and low-latency reads via Cassandra. | <b>Feb 2025 – Apr 2025</b><br>Java, Spark, Kafka, Cassandra |
| <b>Academic Project, Secure Cloud Storage with Facial Recognition</b><br>Built an encrypted cloud file-storage platform with AES per-file encryption and a facial recognition access layer achieving >95% accuracy on 5,000 images.                         | <b>Dec 2023 – Apr 2024</b><br>Python, TensorFlow, OpenCV    |

## VOLUNTARY WORK

|                                                                                                                                                                              |                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| <b>Startup Co-founder, SupClay</b><br>Won <i>Best Company of the Year</i> & PMIEF Project Excellence Award at Injaz Al-Arab YEC 2023, Doha, Qatar.                           | <b>Sep 2023 – Mar 2024</b> |
| <b>National Robotics Team Technician, First Global Challenge</b><br>Silver medal representing Team Tunisia, Washington D.C. Mentored 6 national robotics teams over 6 years. | <b>Jul 2027-Jul 2023</b>   |
| <b>Developer &amp; Team Lead, IAESTE</b><br>Led 10-person team building a student subscription platform and coordinating international exchange programmes.                  | <b>Sep 2022 – Jun 2024</b> |
